# Table of Contents

**KEYNOTE:** Sandia National Laboratories: A Vision for a Nuclear Future, by Alton D. Romig ..................................................... 1

**ADVANCED FISSION ...........................................................................................................................................................................**

A Strategy for US Nuclear Power: The Role of Government ............................................................................................................. 10  
Victor H. Reis  

ISTC: A Non-Proliferation Tool Heavily Involved in Research and Development of Nuclear Energy Systems .................................. 21  
Uwe Meyer  

International Project on Innovative Reactors and Fuel Cycles: User Requirements for Safety ......................................................... 34  
Bernhard Kuczen  

MOTHER MK II: An Advanced Direct Cycle High Temperature Gas Reactor ................................................................................. 43  
Ralph S. Hart  

Safe and Sustainable Nuclear Power Generation with Gas Core Reactor Systems ........................................................................... 52  
Sanjin Anghia  

Accelerator-Driven D Waste Transmutation and Nuclear Energy Production from Thorium Without Reprocessing and Recycling ......................................................................................................................... 61  
Charles Bowman  

**ACCELERATOR-DRIVEN SYSTEMS .........................................................................................................................................................**

MYRRHA: A Multipurpose Accelerator-Driven System for Research & Development ........................................................................... 73  
Hamid Ait Abderrahim  

Design and Construction of the First US Transmutation Experiment ......................................................................................... 80  
V. Vylet  

Measurement of Transport Properties of Graphite for Transmutation Experiments ............................................................................ 85  
A. S. Crowell  

First Studies of the Coupling of an Accelerator to a Subcritical Multiplying System for Thermal Spectrum Transmutation .................. 91  
C. R. Howell  

Multi-cavity Proton Cyclotron Accelerator ......................................................................................................................................... 92  
Robert S. Symons  

Neutrons from p+d Reactions as a Possible Competitor to Spallation for Accelerator-Driven Transmutation ...................................... 101  
R. L. Walter  

VICE—Vacuum Interface Compatibility Experiment: R&D Support for a Windowless Liquid Metal Spallation Target in MYRRHA ............................................................................................................................ 104  
Peter H. Kupschus  

**NUCLEAR WASTE ......................................................................................................................................................................................**

Stigma of the Global Nuclear Legacy and its Impact on the Likelihood of Success of the Nuclear Power Option .................................. 113  
Vladimir Novikov  

Effects of Glow Discharge with Hydrogen Isotope Plasmas on Radioactivity of Uranium .................................................................. 122  
J. Dash  

Measurement of Benchmark Nuclear Data for Thermal Spectrum Transmuter Calculations ............................................................... 127  
A. Tonchev  

Neutron Cross Section Evaluations for Actinides at Intermediate Energies, Pa .................................................................................. 134  
Y. N. Shubin  

Radioactive Waste Transmutation in Pebble-Bed Reactors .................................................................................................................. 144  
José Martinez-Val  

Project SPHINX — Spent Hot Fuel Incineration by Neutron Flux (Experimental Verification of Design Inputs for Transmuter with Liquid Fuel Based on Molten Fluorides) ......................................................... 154  
Miloslav J. Hron  

High Brightness Gamma Ray Generation and its Application to Nuclear Transmutation .................................................................. 163  
Kazuo Imasaki  

**FUSION ENERGY .........................................................................................................................................................................................**

Future of Inertial Fusion Energy ......................................................................................................................................................... 171  
John H. Nuckolls  

From JET to ITER and to a Fusion Power Plant ......................................................................................................................................... 177  
Karl Lackner  

Progress on a Double-Z-pinch Driven Hohlraum for High Yield Inertial Confinement Fusion ................................................................. 189  
M. E. Cuneo  

Preliminary Conceptual Design of a Z-Pinch-Fast Ignitor IFE Power Plant ........................................................................................... 204  
John S. DeGroot  

Comparison of the Cost of External Neutrons for Transmutation: Fusion vs. Accelerator Sources on Non-Conventional High Gain Target Design for ICF ........................................................................................................... 209  
Charles D. Bowman  

Ignition of Imploding Cylinders by the Method of Entropy Injection ................................................................................................. 219  
A. Caruso  

Inertial Confinement Regimes for Advanced Fission
Mireia Piera

Double Radial Peak and E-Scaling in Neutron Production Rate in Spherical Inertial Electrostatic
Confinement Fusion Plasmas
Hidenori Matsuda

Cold Fusion Phenomenon and Its Application to Energy Production and Nuclear Waste Remediation
Hideo Kozima

PIC & HYBRID / PIC MODELING WORKSHOP
Fokker-Planck Analysis of Energy Deposition by Relativistic Electrons in Compressed Plasmas
T. Yokota

Electron Beam Requirement for Fast Ignition of Compressed Fuel
Y. Nakao

Development of Z-pinch Instabilities with Axial Magnetic Field
Vladimir Sotnikov

Particle in Cell Simulations of Intense Relativistic Electron Beams Propagating Through Solid Density Plasma
Robert B. Campbell

Hybrid Particle-in-Cell Simulation of Intense Laser-Plasma Interaction
Dale R. Welch

Development of New Hybrid Simulation Code and its Application to Study of Fast Electron Beam Transport
in High Density Laser Produced Plasmas
T. Taguchi

Implicit Hybrid/PIC code ANTHEM
Rodney J. Mason

High-Current Transport in Near Solid Density Plasma: A Numerical Investigation
Hartmut Ruhl

Collisional Electron Transport in Sandwich Targets: A Numerical Investigation
Andreas. J. Kemp

SPACE NUCLEAR POWER & PROPULSION
Pulsed Power-Driven Micro-fission for Space Propulsion
Steve A. Slutz

Micro-fission Materials and Neutronics Analysis for Mini-Mag Orion
Roger X. Lenard

Mini-Mag Orion: A Pulsed Fission Rocket for Crewed Solar System Exploration
Ralph E. Ewig

Laboratory and Computer Simulations of Plasma Impulse and Energy Conversion in Future ICF-propulsion
of Spacecrafts with Dipole-like Magnetic Field
Yu. P. Zakharch

RTGs and Reactors for Remote Terrestrial Locations
Ray S. Leyland

APPLICATIONS
Experiments in Laser-Induced Nuclear Physics
Paul McKenna

Fission of Actinides Using High Intensity Laser Plasma Interactions: A Comparison of Tabletop and Giant Laser Pulse Systems
Jean Galy

Low Energy Reaction Cell for Portable Power
George H. Miley

Electro-Nuclear Collapse and its Potential Applications
Takaaki Matsumoto

Exothermal Effect by Passing a Direct Current Through a Composite Conductor: Possible Nuclear Explanation
Jacques Dufour

Research into Powerful Solid X-Ray Laser (...) with Excitation of High Current Glow Discharge Ions
Alexander B. Karabut

Theory of X-ray Laser Emission from Highly Loaded Hydrides
George H. Miley

POSTERS

Theoretical Analysis of the Cold Fusion Process: Fulvio Frisone

Electron Motion and Thomson Scattering of Interfering Counter Propagating High-Intensity Laser Beams: Scott M. Sepke

Concept Design of a New Liquid Metal Target Station for Accelerator Driven Systems: Eriachi Nishimura

Experimental Registration of a High Current Glow Discharge of the Excited Long Living Atomic
Levels with the Energy of 1-3 keV and Nuclear Products Emission in the Solid Medium: A. B. Karabut

On Nuclear Topics in General Physics and Chemistry: Ludwik Kowalski

Spectroscopy of Argon-doped Capsule Implosions Driven by a Z-pinch Dynamic Hohlraum: Gordon Chandler
